

# Are you properly destroying your confidential data?

*Environmentally safe, efficient and quick. A must-have for anyone charged with the responsibility of destroying unneeded CD, CD-R and CD-RW discs containing corporate or government sensitive and classified information.*

## **FAST OPERATION —**

10 to 15 seconds to completely remove all information from any CD, CD-R or CD-RW disc.

## **HIGH LEVEL OF SECURITY —**

Designed to substantially exceed all published recommendations and standards for the removal of the data layer on compact disc media. DoD approved for all classified discs.

## **MEDIA IDENTIFICATION —**

The inner hub or clamping area remains untouched to allow positive media identification for those applications where certification of destruction is required.

## **APPROVED BY THE DEPARTMENT OF DEFENSE**

## **DX-CDm™ Manually Operated Device**

The DX-CDm™ is the world's first fully manual device demonstrated to substantially exceed the DoD specification for residue particle size when removing the information-bearing layer on CD-ROM, CD-R and CD-RW discs.

The DX-CDm™ device is designed to be used in ships, aircrafts, fighting vehicles and field units. The 20-pound unit uses very little space and can be mounted in any convenient location. Operation is simple: open the door, place the media on the unit label side up (paper labels and stickers must be removed prior to destruction), close the door, turn the built-in handle and in a few seconds the data has been removed from the disc.
